Summer means abundant sunshine and power generation. Days are usually long during summer, which means there are more daylight hours, and your solar panels receive more power.

Energy think-tank Ember estimates that today, across the midday peaks on the summer solstice - 20% of the world's electricity will come from solar, up from 16% last year.

CHENNAI: As power demand rises with the onset of summer, Tamil Nadu is witnessing a parallel surge in solar generation, offering a slight relief to the grid and

Solar generated 11.6% of total summer demand in Texas, a 40% year-over-year increase. As they continue to prove themselves, the role of solar and storage in meeting demand will

Chennai: With summer intensifying across Tamil Nadu, electricity demand has begun to rise sharply across urban and rural regions. At the same time, a notable increase in solar power

Roughly 89% of all solar panels are installed in the northern hemisphere, according to the report, resulting in a seasonally higher share of global solar generation during the summer

The longer daylight hours typical of summer, coupled with the sun's more direct angle, contribute to higher solar energy generation, often resulting in an increase of 25-50% in

Currently, the northern hemisphere houses 89% of the installed solar modules worldwide. Therefore, global solar generation peaks in the summer months of the northern hemisphere.

We compare solar panel output in the summer vs the winter, and explain how much you can save on your bills in the summer months.

CHENNAI: Tamil Nadu recorded its highest-ever solar power generation and all-time solar energy consumption on Wednesday (April 1), even as overall power demand rose sharply amid
